Without ZyBlack™ Quenching Solution

With ZyBlack™ Quenching Solution

Kidney tissue section hybridized with the ZytoLight® SPEC PTEN/CEN 10 Dual Color Probe.

## Product Description

ZyBlack™ Quenching Solution is a ready-to-use solution to reduce autofluorescence on formalin-fixed paraffin-embedded specimens.

It can be easily incorporated into the manual FISH protocol by applying it after the proteolytic pretreatment.

One of the major concerns of Fluorescence *in situ* Hybridization (FISH)-based diagnostic assays is the interference by autofluorescence. Several types of tissue tend to emit intense autofluorescence, including brain, liver, kidney and myocardium, making it difficult to evaluate FISH results.

ZyBlack™ Quenching Solution reduces autofluorescence without adversely affecting tissue integrity or specific fluorescence signals.
